## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 20, 21, 27, and 28 have been considered but are moot in view of the new ground(s) of rejection.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 20, 21, 27, and 28 are rejected under 35 U.S.C. 102(e) as being anticipated by Lauffenburger et al (US Patent 6,661,774 B1).

Regarding to claims 20, 21, 27, and 28, Lauffenburger discloses a virtual output queuing controlling device 12 (fig. 1) in an input buffering switch with a virtual output queuing technique, comprising a first specialized class for a CBR traffic 14 (fig. 1 col. 10 lines 58-67); a second class 14 for the other traffics than the CBR traffic (fig. 1 col. 10 lines 58-67); a cell read-out controlling section 20 that reads out cells from each of said classes (fig. 1 col. 3 lines 44-53); and a connection request generation section 16 that makes a connection request for a switch scheduler 24 (fig. 1 col. 3 lines 41-44), which can execute a priority control, characterized in that, when said connection request generation section received connection request from said switch scheduler, said cell read-out controlling section is a section that reads out the cells from said first class prior to said second class (col. 3 lines 54-61 and col. 11 lines 3-11).

#### ***Allowable Subject Matter***

5. Claims 22 and 23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 1-19, 24-26, and 29-88 are allowed.
